

PLANETS PUREST WATER™

"One Planet, One Solution"™

 **NANO SPORT™**

Water Purification Sport Bottles

Presented by  **Products**, an R&D division of Planets Purest Water™ Corp.

“NANO SPORT™”

(Water Purification Sports Bottles)

The most technologically advanced portable water filtration system in the world
Instantly purifies water to exceed NSF Standards

Features / Benefits of the “NANO SPORT™”

Easy pour spouts

Portable / Lightweight

Water taste enhancement

Various color assortments

Removes Radio-Active substances

Non-leaching food grade container

Simple filtration medium change out

More economical and natural over others

NANO-Silver Technology for added safety

Removes all heavy metals (including lead)

Superior water filtration (replaces bottled water & RO systems)

Removes Chlorine, THM's , carcinogens , chemicals, impurities, VOC's...

**Bacteria Sterilization
Technology**

Available sizes: 12 oz. (350 ml) --- 16.9 oz. (500ml) -- 33.8 oz. (1,000 ml -1 liter)

Components of the NANO SPORT™

Portable water purifier

Filter: P.E Resin + Activated Carbon Powder + Silver

Special P.E Resin – It has a pore on particle itself

Constant filter pores: 0.5 ~ 1µm in size.

Activated Carbon Powder

Silver Compound

Bottle: P.E.

Principles of the activated carbon filtration

There are two basic types of water filtration occurring: Particulate filters & adsorptive/reactive filters. Particulate filters exclude particles by size, and adsorptive/reactive filters contain a material (medium) that either adsorbs or reacts with a contaminant in water. The contaminant is attracted to (adsorbed) the surface of the carbon particles. The specialty characteristics of the carbon material used influence the efficiency of adsorption.

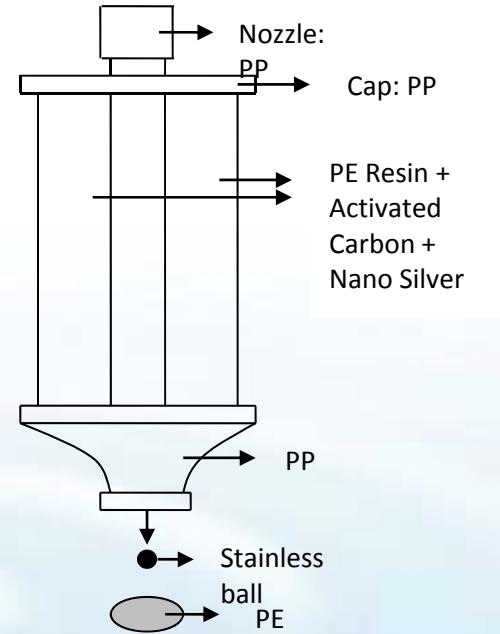

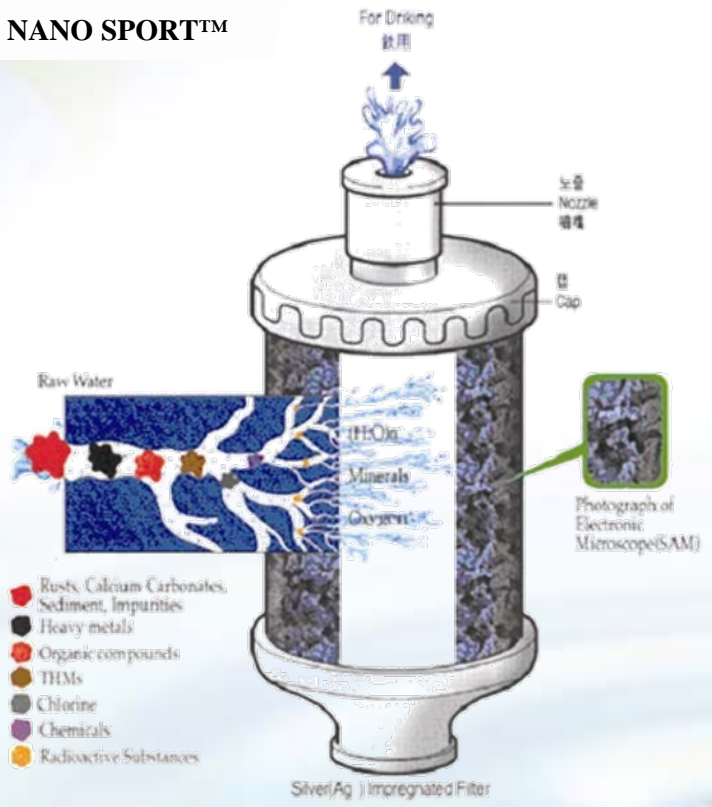

A second characteristic is the attraction of the contaminant to the carbon surface. If several compounds are present in the water, strong absorbers will attach to the carbon in greater quantity than others with weak adsorbing ability. These combined factors enable the activated carbon material to draw the molecules / Contaminants out of the water.

Silver as natural sterilizer

Silver can function in sterilizing nearly all single-cell bacteria on earth. Although the clear-cut correlation in silver to single-cell bacteria has not been explained, the most persuasive one is that silver suppresses the special enzyme that works upon the metabolism of bacteria such as digestion or respiration. It is known that less than 6 minutes of contact with silver can kill nearly all harmful bacteria in the world.

Water Purification Properties

NANO SPORT™

Provides an astonishing 2,000 liters of highly purified, safe water per filter interval

“NANO SPORT™”

(Approvals / Accreditations)

Approvals / Accreditations, etc. of antimicrobial safety agents used in the NANO SPORT™

As a proof of high product safety, it's components are approved or accredited by various organizations such as:

1. U.S. FDA (Food and Drug Administration)

Approved as a Food Contact Substance and can be used for every type of food grade products. As for food types, it can be used for all types of food including from A to H according to the FDA classification.

2. U.S. EPA (Environmental Protection Agency)

It is approved for use in preservatives and antimicrobials for food-contact, potable water-contact and non food-contact applications.

3. U.S. NSF (National Safety Foundation)

A private accrediting organ for equipment used for waterworks)

Registered with NSF as Food Equipment Materials (Applicable standard: ANSI/NSF Standard 51). Also registered as an Antimicrobial Compound

4. PCPC Registered (Personal Care Products Council)

Listed on the schedule 3 of the Ministry of Health and Welfare Notice "Cosmetics Standards" and the Ministry of Health, Labor and Welfare Notice

Other Uses

Cooking

Office use

Ice / Beverages

Baby Formulas

Health Style Gifts

Children for School

Before / After Workouts

Vacations / Business trips

“TASTE” the difference
“FEEL” the difference

“NANO SPORT™”

(Approvals / Accreditations)

Approvals / Accreditations, etc. of antimicrobial safety agents used in the NANO SPORT™

As a proof of high product safety, it's components are approved or accredited by various organizations such as:

Component safety accreditations: U.S. FDA /U.S. EPA / U.S. NSF / PCPC registered

Approved as a Food Contact Substance and can be used for every type of food grade products. As for food types, it can be used for all types of food including from A to H according to the FDA classification.

U.S. EPA (Environmental Protection Agency)

It is approved for use in preservatives and antimicrobials for food-contact, potable water-contact and non food-contact applications.

U.S. NSF (National Sanitation Foundation)

A private accrediting organization for equipment used for waterworks)

Registered with NSF as Food Equipment Materials (Applicable standard: ANSI/NSF Standard 51). Also registered as an Antimicrobial Compound

Summary Sheet

“NANO SPORT™” (Water Purification Sports Bottles)

Portable / Lightweight

Water taste enhancement

Various color assortments

Removes Radio-Active substances

Non-leaching food grade container

NANO-Silver Technology for added safety

Supplies 2,000 liters of highly purified H₂O

Removes heavy metals , chlorine, chemicals, carcinogens, etc...

Available sizes: 12 oz. (350 ml) --- 16.9 oz. (500ml) -- 33.8 oz. (1,000 ml -1 liter)

Component safety accreditations: U.S. FDA /U.S. EPA / U.S. NSF / PCPC Registered

Bacteria Sterilization
Technology

The most technologically advanced portable water filtration system in the world
Instantly purifies water to exceed NSF Safety Standards
